

Documentation – Personal Website

User Guide: This guide will help users navigate the website and understand its features.

The website contains five sections: home, about, documents, projects, and contact.

Home Page:

- The home page provides a brief description of what the website is about and showcases two JavaScript features: a wheel that displays the website owner's specialties and a typing animation that repeats the owner's name.
- The navigation bar located at the top of the page can be used to access the other sections of the website.

About Page:

- The about page provides a brief introduction to the website owner.
- Users can click on the "Read More" button to access additional information.

Documents Page:

- The documents page is where users can download the owner's CV, motivational letter, and certificates using HTML links.

Projects Page:

- The projects page showcases six of the owner's personal projects.

Contact Page:

- The contact page allows users to send a message and their contact details using HTML and JavaScript. The contact data and message are stored locally on the user's browser
- Technical Documentation for Developers: This documentation is for developers who want to understand the technical aspects of the website.
- Overall, the website is a great example of a responsive website with useful features such as a wheel showcasing specialties, a typing animation, and local storage of user data. I hope this documentation helps users navigate and use the website effectively.
